

Progression of skills in Scientific Knowledge

This document shows how scientific knowledge objectives are designed in a progressive way to ensure learners become more proficient scientists as they move through the school, securing and applying the objectives. Each teacher should be aware of their own science objectives, and of those which have come before.

| for our EYFS learners in relation to Understanding the World | | | Biology | Chemistry | Physics | | |
|--|---|--|--|--|---|--|--|
| EYFS | National curriculum KSI and KS2 Coverage | Year I | Year 2 | Year 3 | Year 4 | Year 5 | Year 6 |
| Me, my family and my school Harvest Mini beast hunt | Animals Including Humans | Pupils should be taught to: identify and name a variety of common animals including fish, amphibians, reptiles, birds and mammals identify and name a variety of common animals that are carnivores, herbivores and omnivores describe and compare the structure of a variety of common animals (fish, amphibians, reptiles, birds and mammals including pets) identify, name, draw and label the basic parts of the human body and say which part of the body is associated with each sense | Pupils should be taught to: notice that animals, including humans, have offspring which grow into adults find out about and describe the basic needs of animals, including humans, for survival (water, food and air) describe the importance for humans of exercise, eating the right amounts of different types of food, and hygiene | Pupils should be taught to: • identify that animals, including humans, need the right types and amount of nutrition, and that they cannot make their own food; they get nutrition from what they eat • identify that humans and some other animals have skeletons and muscles for support, protection and movement | Pupils should be taught to: • describe the simple functions of the basic parts of the digestive system in humans • identify the different types of teeth in humans and their simple functions • construct and interpret a variety of food chains, identifying producers, predators and prey | Pupils should be taught to: • describe the changes as humans develop to old age | Pupils should be taught to: • identify and name the main parts of the human circulatory system, and describe the functions of the heart, blood vessels and blood • recognise the impact of diet, exercise, drugs and lifestyle on the way their bodies function • describe the ways in which nutrients and water are transported within animals, including humans |
| Harvest Compare and contrast environments — polar region, desert, jungle, under the sea and space | Living things and their habitats | Set Life | Pupils should be taught to: explore and compare the differences between things that are living, dead, and things that have never been alive identify that most living things live in habitats to which they are suited and describe how different habitats provide for the basic needs of different kinds of animals and plants, and how they depend on each other identify and name a variety of plants and animals in their habitats, including microhabitats describe how animals obtain their food from plants and other animals, using the idea of a simple food chain, and identify and name different sources of food | | Pupils should be taught to: recognise that living things can be grouped in a variety of ways explore and use classification keys to help group, identify and name a variety of living things in their local and wider environment recognise that environments can change and that this can sometimes pose dangers to living things | 1 | Pupils should be taught to: describe how living things are classified into broad groups according to common observable characteristics and based on similarities and differences, including microorganisms, plants and animals give reasons for classifying plants and animals based on specific characteristics |

| Planting and growing plants | Plants | Pupils should be taught to: • identify and name a variety of common wild and garden plants, including deciduous and evergreen trees • identify and describe the basic structure of a variety of common flowering plants, including trees | Pupils should be taught to: observe and describe how seeds and bulbs grow into mature plants find out and describe how plants need water, light and a suitable temperature to grow and stay healthy | Pupils should be taught to: • identify and describe the functions of different parts of flowering plants: roots, stem/trunk, leaves and flowers • explore the requirements of plants for life and growth (air, light, water, nutrients from soil, and room to grow) and how they vary from plant to plant • investigate the way in which water is transported within plants | | | |
|--|--------|--|---|---|--|---|--|
| Explore changing state of matter Explore materials and textures | | Everyday Materials Pupils should be taught to: • distinguish between an object and the material from which it is made • identify and name a variety of everyday materials, including wood, plastic, glass, metal, water, and rock • describe the simple physical properties of a variety of everyday materials • compare and group together a variety of everyday materials on the basis of their simple physical properties | Uses of Everyday Materials Pupils should be taught to: • identify and compare the suitability of a variety of everyday materials, including wood, metal, plastic, glass, brick, rock, paper and cardboard for particular uses • find out how the shapes of solid objects made from some materials can be changed by squashing, bending, twisting and stretching | explore the part that flowers play in the life cycle of flowering plants, including pollination, seed formation and seed dispersal Rocks Pupils will continue their work on materials learning specifically about rocks this year. Pupils should be taught to: compare and group together different kinds of rocks on the basis of their appearance and simple physical properties describe in simple terms how fossils are formed when things that have lived are trapped within rock recognise that soils are made from rocks and organic matter | States of Matter Pupils should be taught to: • compare and group materials together, according to whether they are solids, liquids or gases • observe that some materials change state when they are heated or cooled, and measure or research the temperature at which this happens in degrees Celsius (°C) • identify the part played by evaporation and condensation in the water cycle and associate the rate of evaporation with temperature | Properties and Changes of Materials Pupils should be taught to: compare and group together everyday materials on the basis of their properties, including their hardness, solubility, transparency, conductivity (electrical and thermal), and response to magnets know that some materials will dissolve in liquid to form a solution, and describe how to recover a substance from a solution use knowledge of solids, liquids and gases to decide how mixtures might be separated, including through filtering, sieving and evaporating give reasons, based on evidence from comparative and fair tests, for the particular uses of everyday materials, including metals, wood and plastic demonstrate that dissolving, mixing and changes of state are reversible changes explain that some changes result in the formation of new materials, and that this kind of change is not usually reversible, including changes associated with burning and the action of acid on bicarbonate of soda | |

| Walks to Brookvale Park every term to observe seasonal changes. | Seasonal Changes | Pupils should be taught to: observe changes across the 4 seasons observe and describe weather associated with the seasons and how day length varies | | | |
|---|---------------------------|--|--|--|---|
| | Evolution and Inheritance | | Rocks Pupils should be taught to: compare and group together different kinds of rocks on the basis of their appearance and simple physical properties describe in simple terms how fossils are formed when things that have lived are trapped within rock recognise that soils are made from rocks and organic matter | | Pupils use their previous knowledge of fossils from year three where they look closely at how fossils are studied to identify changes in animals over time. Pupils should be taught to: • recognise that living things have changed over time and that fossils provide information about living things that inhabited the Earth millions of years ago • recognise that living things produce offspring of the same kind, but normally offspring vary and are not identical to their parents • identify how animals and plants are adapted to suit their environment in different ways and that adaptation may lead to evolution |
| Explore magnets | Forces and Magnets | | Pupils should be taught to: compare how things move on different surfaces notice that some forces need contact between 2 objects, but magnetic forces can act at a distance observe how magnets attract or repel each other and attract some materials and not others compare and group together a variety of everyday materials on the basis of whether they are attracted to a magnet, and identify some magnetic materials describe magnets as having 2 poles predict whether 2 magnets will attract or repel each other, depending on which poles are facing | Pupils should be taught to: explain that unsupported objects fall towards the Earth because of the force of gravity acting between the Earth and the falling object identify the effects of air resistance, water resistance and friction, that act between moving surfaces recognise that some mechanisms including levers, pulleys and gears allow a smaller force to have a greater effect | |
| Explore light and colour | Light | | Pupils should be taught to: recognise that they need light in order to see things and that dark is the absence of light notice that light is reflected from surfaces recognise that light from the sun can be dangerous and that there are ways to protect their eyes | | Pupils should be taught to: recognise that light appears to travel in straight lines use the idea that light travels in straight lines to explain that objects are seen because they give out or reflect light into the eye |

| | at shadows are explain that we see things |
|-----------------|--|
| | because light travels from |
| | is blocked by an light sources to our eyes or |
| opaque obje | |
| | ns in the way that and then to our eyes |
| the size of s | shadows change • use the idea that light travels |
| | in straight lines to explain why |
| | shadows have the same shape |
| | as the objects that cast them |
| Electricity | Pupils should be taught to: Pupils should be taught to: |
| | • identify common appliances that • associate the brightness of a |
| | run on electricity lamp or the volume of a |
| | • construct a simple series electrical buzzer with the number and |
| | |
| | circuit, identifying and naming voltage of cells used in the |
| | its basic parts, including cells, circuit |
| | wires, bulbs, switches and buzzers • compare and give reasons for |
| | identify whether or not a lamp variations in how components |
| | will light in a simple series function, including the |
| | circuit, based on whether or not brightness of bulbs, the |
| | the lamp is part of a complete loudness of buzzers and the |
| | loop with a battery on/off position of switches |
| | recognise that a switch opens and use recognised symbols when |
| | closes a circuit and associate this representing a simple circuit in |
| | with whether or not a lamp a diagram |
| | lights in a simple series circuit |
| | • recognise some common |
| | conductors and insulators, and |
| | associate metals with being good |
| | conductors |
| | |
| Earth and Space | Pupils should be taught to: |
| | describe the movement of the |
| | Earth and other planets |
| | relative to the sun in the solar |
| | system |
| | describe the movement of the |
| | moon relative to the Earth |
| | • describe the sun, Earth and |
| | moon as approximately |
| | spherical bodies |
| | • use the idea of the Earth's |
| | rotation to explain day and |
| | night and the apparent |
| | movement of the sun across |
| | the sky |
| Sound | Pupils should be taught to: |
| | • identify how sounds are made, |
| | |
| | associating some of them with |
| | something vibrating |
| | recognise that vibrations from |
| | sounds travel through a medium |
| | to the ear |
| | • find patterns between the pitch |
| | of a sound and features of the |
| | object that produced it |
| | • find patterns between the volume |
| | |
| | of a sound and the strength of |
| | of a sound and the strength of the vibrations that produced it |

| Scientists and Inventors | Pupils should be taught to: identify and name a variety of common wild and garden plants, including deciduous and evergreen trees; describe and compare the structure of a variety of common animals (fish, amphibians, reptiles, birds and mammals including pets); identify, name, draw and label the basic parts of the human body and say which part of the body is associated with each sense; describe the simple physical properties of a variety of everyday materials; compare and group together a variety of everyday materials on the basis of their simple physical properties; observe and describe weather associated with the seasons and how day length varies. | Pupils should be taught to: • find out and describe how plants need water, light and a suitable temperature to grow and stay healthy; • describe how animals obtain their food from plants and other animals, using the idea of a simple food chain, and identify and name different sources of food; • describe the importance for humans of exercise, eating the right amounts of different types of food, and hygiene; • identify and compare the suitability of a variety of everyday materials, including wood, metal, plastic, glass, brick, rock, paper and cardboard for particular uses; • find out about people who have developed new materials (non-statutory). | Pupils should be taught to: explore the requirements of plants for life and growth (air, light, water, nutrients from soil, and room to grow) and how they vary from plant to plant; identify that humans and some other animals have skeletons and muscles for support, protection and movement; compare and group together different kinds of rocks on the basis of their appearance and simple physical properties; describe in simple terms how fossils are formed when things that have lived are trapped within rock; notice that light is reflected from surfaces; observe how magnets attract or repel each other and attract some materials and not others. | recognise that sounds get fainter as the distance from the sound source increases Pupils should be taught to: recognise that environments can change and that this can sometimes pose dangers to living things; identify the different types of teeth in humans and their simple functions; compare and group materials together, according to whether they are solids, liquids or gases; observe that some materials change state when they are heated or cooled, and measure or research the temperature at which this happens in degrees Celsius (°C); recognise that vibrations from sounds travel through a medium to the ear; identify common appliances that run on electricity; construct a simple series electrical circuit, identifying and naming its basic parts, including cells, wires, bulbs, switches and buzzers; recognise that a switch opens and | Pupils should be taught to: describe the differences in the life cycles of a mammal, an amphibian, an insect and a bird; compare and group together everyday materials on the basis of their properties, including their hardness, solubility, transparency, conductivity (electrical and thermal), and response to magnets; use knowledge of solids, liquids and gases to decide how mixtures might be separated, including through filtering, sieving and evaporating; describe the movement of the Earth, and other planets, relative to the Sun in the solar system; find out about the work of naturalists and animal behaviourists (non-statutory); describe how scientific ideas have changed over time (non-statutory). | Pupils should be taught to: • give reasons for classifying plants and animals based on specific characteristics; • identify and name the main parts of the human circulatory system, and describe the functions of the heart, blood vessels and blood; • recognise the impact of diet, exercise, drugs and lifestyle on the way their bodies function; • recognise that living things have changed over time and that fossils provide information about living things that inhabited the Earth millions of years ago; • use recognised symbols when representing a simple circuit in a diagram. |
